NETFLIX BINGE-WATCHING TRENDS

Exploring Viewing Patterns Through Data Science and Visualization

NETFLIX & BINGE-WATCHING

Overview of the Platform & Viewer Behavior

Netflix is a global streaming giant with over 200 million subscribers worldwide, offering a vast library of movies, TV shows, documentaries, and original content across 190+ countries.

Binge-watching — consuming multiple episodes in a single sitting — has become a defining behavior of the streaming era. Understanding what drives it is key to enhancing user experience and content strategy.

PROBLEM STATEMENT: WHAT DRIVES BINGE-WATCHING?

Binge-Worthy Shows

Why do some shows and movies become binge-worthy? We investigate the content attributes, storytelling patterns, and platform features that compel viewers to keep watching episode after episode.

Genre Influence

Does genre shape binge-watching behavior? We analyze whether Drama, Thriller, or Comedy titles drive longer viewing sessions and higher engagement rates across Netflix's global audience.

TV Shows vs. Movies

Are TV shows consumed more intensively than movies? We compare viewing duration, session frequency, and completion rates between episodic series and standalone film content on the platform.

Top Content-Producing Countries

Which countries produce the most popular and most-watched Netflix content? We map global production hotspots and examine how regional content resonates with international audiences.

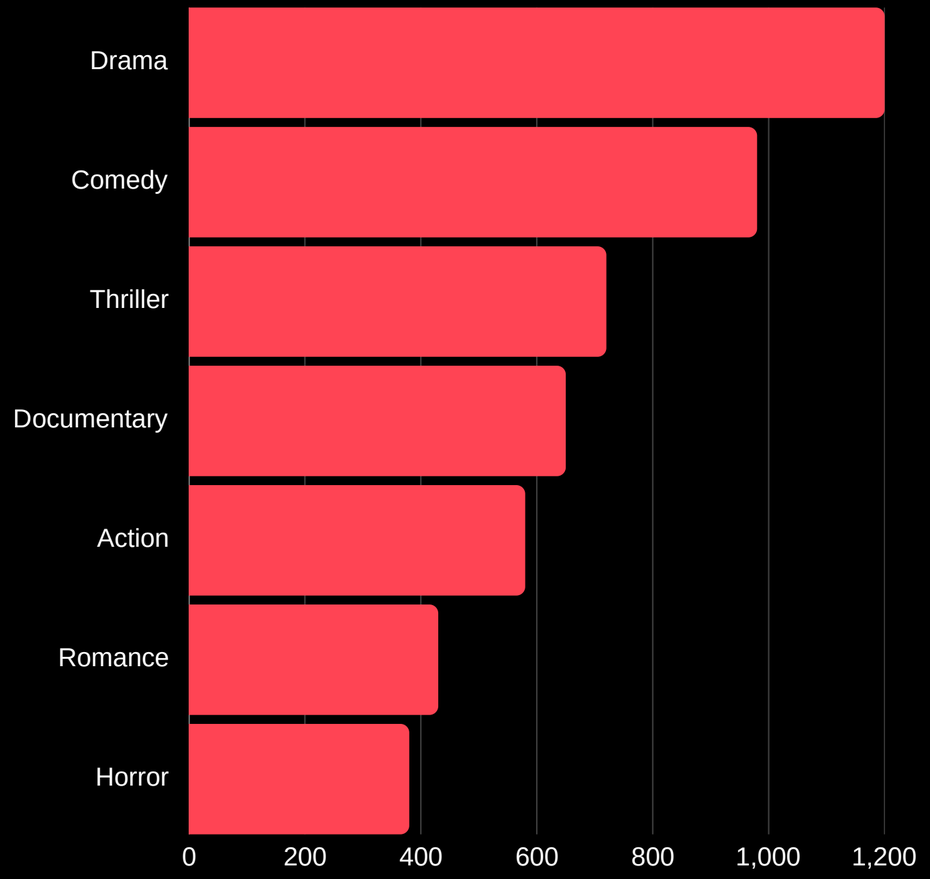

ALIGNING WITH UN SDGS

SDG 3: Good Health & Well-being | SDG 4: Quality Education

SDG 3 promotes healthy screen-time awareness and understanding binge-watching's impact on well-being. SDG 4 highlights Netflix's vast library of educational documentaries and learning content, democratizing quality education globally.

POPULAR GENRES

#1

Drama Leads

Drama dominates Netflix with the highest number of titles, followed closely by Comedy and Thriller. These top genres account for over 60% of all content on the platform.

Genre Drives Binge-Watching Behavior

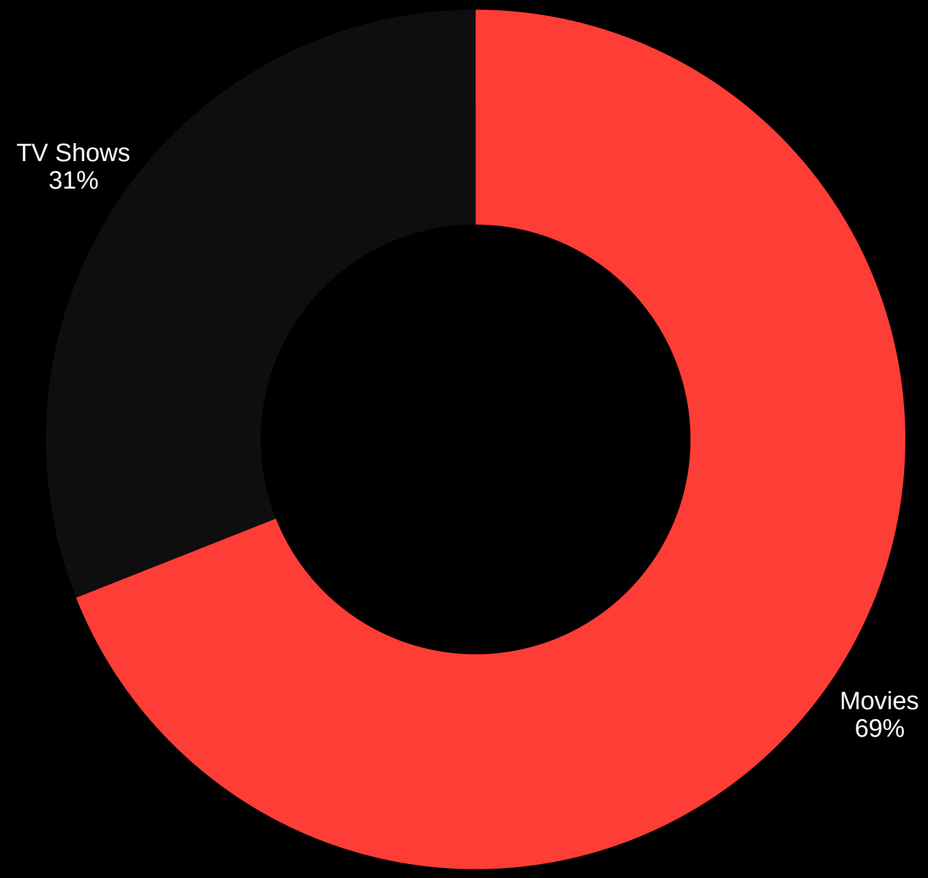

Analysis reveals that Drama and Comedy titles generate the longest average watch sessions. Thriller and Documentary genres show strong completion rates, indicating high viewer engagement.

CONTENT TYPE DISTRIBUTION

Movies vs. TV Shows on Netflix

Netflix's library is dominated by Movies (~70%) compared to TV Shows (~30%). However, TV Shows drive significantly higher binge-watching behavior due to their episodic, serialized format — keeping viewers hooked across multiple sessions.

TECHNOLOGIES POWERING THE ANALYSIS

Python & Pandas

Python serves as the core programming language for this project. Pandas enables efficient data manipulation, cleaning, and transformation of large Netflix datasets with ease.

NumPy

NumPy provides powerful numerical computing capabilities, enabling fast array operations, statistical computations, and mathematical processing of binge-watching trend data.

Matplotlib & Seaborn

Matplotlib delivers flexible, publication-quality static visualizations. Seaborn extends this with elegant statistical graphics, making genre and content trend charts visually compelling.

Plotly

Plotly enables interactive, dynamic visualizations including dashboards and animated charts, bringing Netflix binge-watching insights to life with engaging, explorable data graphics.
